SUPPLEMENTAL SHEET.

Remarks:

There is at the present time, approximately 1.20 second feet of unappropriated water in Brady Spring that can be put to beneficial use for power and irrigation. There are no agricultural lands between the point of diversion and the Indian Springs Basin; (Mr. P.I. Smith having made a thorough test of this). The cost of conducting the water in pipes or otherwise to the Indian Springs Basin for irrigation only, would be far too great to be considered, except that power be generated from the flow of the water before it is used for irrigation.

The additional amount of arable land, that would otherwise be worthless, that can be put under irrigation by utilizing the power for pumping water and other purposes will largely increase the beneficial use of the water applied for.

No prior appropriators will be injured if this application is granted.
